Problem Set 3: PHIL 1068 Elementary Logic: Due 4:00PM 21 March 2011

Student ID Number \_\_\_\_\_ Name \_\_\_\_\_

1. (21 marks)

True or false? Circle 'T' if the statement is true. Circle 'F' if the statement is false. For this question, you should assume that  $\varphi$  and  $\psi$  are WFFs of SL, and that "the system" is our SL natural deduction system.

- T F If rule  $\rightarrow I$  is removed from the system, then the resulting system would not be sound.
- T F "If ... then ..." is a truth functional connective in English.
- T F Any natural deduction system that is complete is also sound.
- T F If a valid argument has all false premises, then its conclusion is false.
- T F Some SL sequent is not valid.
- T F The disjunction of  $\varphi$  and the negation of  $\varphi$  is derivable with no dependencies in the system.
- T F " $\sim \sim A \lor B$ " is an expression in SL.
- T F There is a derivation in the system of  $"((A\&B) \rightarrow (\sim B \rightarrow B))"$  with no dependencies.
- T F If a natural deduction system is sound it is also complete.
- T F The conclusion of a valid argument cannot be false.
- T F If the premises of an argument are all true, then the argument is valid.
- T F If  $\varphi$  is a contradiction, then  $\varphi \vdash \psi$  is derivable in the system.
- T F If rule PC is removed from the system, then the resulting system would not be complete.
- T F There is a natural deduction system for SL which is neither complete nor sound.

2. (25 marks) Circle your answer.

Suppose rule  $\forall I$  is removed from the SL natural deduction system.

Is the revised system sound?	YES	NO	
Is the revised system complete?	YES	NO	
Suppose rule & $I$ is removed from	the SL natu	ural deduction syst	æm.
Is the revised system sound?	YES	NO	
Is the revised system complete?	YES	NO	
Suppose rule $\sim I$ is removed from	the SL natu	ural deduction syst	em.
Is the revised system sound?	YES	NO	
Is the revised system complete?	YES	NO	

Suppose the SL natural deduction	system is revised	d by adding the following rule:			
(NR2) If you have derived $(\varphi \to \psi)$ , and derived $(\psi \to \gamma)$ ,					
then you can write down $(\varphi \to \gamma)$ , depending on					
everything $(\varphi \to \psi)$ depends on.					
Is the revised system sound?	YES	NO			
Is the revised system complete?	YES	NO			
Suppose our natural deduction system is revised by adding the following rule: (NR1) if you have derived $\varphi$ and you have derived $\psi$ then you can write down ( $\varphi \rightarrow$					

depending on everything  $\psi$  depends on.

Is the revised system sound?	YES	NO
Is the revised system complete?	YES	NO

3. (4 marks)

Can the truth table method be used to help show the following?  $(A \lor B) \vdash (\sim A \to B)$ 

If yes, explain how. If no, explain why not.

 $\psi$ ),

- 4. (10 marks) Translate the following statements into MPL. Preserve as much structure as possible. Use 'F' to translate 'is funny', 'O' to translate 'is old', and 'm' to translate 'Mary'.
  (a) Something is both funny and old.
  - (b) Everything is old but Mary is not old.
  - (c) If Mary is funny then something is old.
